

Task 1.1P Reflection and Screenshots – Michael Catley

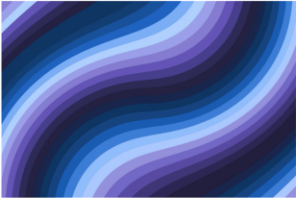

I found that this task was a good introduction into learning how to write code in HTML, as it got me to jump straight into creating new things I have never done before such as forms and tables. I also found that by implementing CSS in a variety of ways, it allowed me to understand how important styling is in webpages, and where each styling method plays an important role. I found myself having to troubleshoot with getting the CSS style sheet to link with the webpage, but found that after utilising the resources I had available I was able to create a working first sample webpage which met the requirements of the task, including using HTML headers and using CSS in 3 different ways.
